Intro

After purchasing a GoPro Hero 10 with some additional batteries I realized that I have nothing to carry those batteries in. Well... Instead of buying something I designed this small case to store my additional batteries and MicroSD cards.

Print Settings

I always use PrusaSlicer settings as a start point and tweak some parameters based on the filament I use or characteristics I need from the final print.

For this one, I only change print speed by making it a bit faster.

No need for support on this print.

Additional Materials

For this assembly, you will need some kind of **metal rods** with a **diameter** of around **Ø 2mm** and a **length** of **20 mm**. You can use a wire, plastic rods, even m2 screws. The idea is to make a point of rotation for the hinges on the box.

Assembly

The assembly is pretty straightforward. Use the image I uploaded which illustrates step by step how to put everything together.
